

## Executive Summary

*Professional GNU/Linux system administrator and developer seeking exciting and challenging opportunities to solve distributed environment management problems. Would also prefer to work for a company with a strong respect for free and open source software and one willing to contribute back upstream. Skilled with various tools and languages, I am seeking to work for teams of other like-minded and capable individuals.*

## Education

|          |  |          |   |
|----------|--|----------|---|
| Jan 2017 | Eastern Connecticut State University<br>Willimantic, Connecticut USA | Dec 2014 | Manchester Community College<br>Manchester, Connecticut USA |
|          | Bachelors in Computer Science<br>UPE Honors Society<br>GPA 3.9       |          | Associates in General Studies<br>GPA 3.8                    |

## Work Experience

Cigna — Jan 2014 to Sep 2016

|                        |   |
|------------------------|---|
| Private Cloud          | Tasked with developing various features for internally used cloud management and orchestration technologies to enable customers to further automate their various workloads. One example: developed a feature which allowed centralized public key storage; this allows customers to login without the use of a password. |
| Delivery Accelerations | Tasked with developing features to enable customers to quickly create advanced continuous integration and deployment pipelines. Was also tasked with creating APIs to allow for enabling dynamic monitoring for services using technologies like Nagios Core.   |

## Competencies

|           |  |
|-----------|--|
| Github    | <a href="https://github.com/adedomin">https://github.com/adedomin</a><br><a href="https://github.com/GeneralUnRest">https://github.com/GeneralUnRest</a>   |
| Languages | Java, Scala, Clojure (Build tools, IDEs and various frameworks)<br>JavaScript (Node.js, web development, tools, etc)<br>Perl, Python, Shell scripting, other scripting languages<br>Ansible, Puppet  |
| Concepts  | Agile trained developer<br>Continuous integration and continuous deployment<br>Distributed Computing (microservice oriented web applications)<br>Object oriented and functional design<br>Advanced text processing<br>Leveraging various databases for object and persistent app storage |
