Anthony DeDominic   anthony@dedominic.pw

Goals

Professional GNU/Linux system administrator and developer seeking exciting and challenging oppertunities to solve distributed environment management problems. Would also prefer to work for a company with a strong respect for free and open source software and one willing to contribute back upstream.

Education

Dec 2016	Eastern Connecticut State University Willimantic, Connecticut USA Bachelors in Computer Science GPA 4.0	Dec 2014	Manchester Community College Manchester, Connecticut USA Associates in General Studies GPA 3.8

Work Experience

Cigna - Private Cloud CURRENT - Mar 2016	I was tasked with developing various features for our internally used cloud management and orchestration technologies to enable customers to further automate their various workloads. An example, I developed a feature which allowed for centralized public key storage. This allowed customers the ability to passwordlessly log in to any machine they had access to.
Cigna - Delivery Accelerations Mar 2016 - Jan 2014	In this role I was tasked with developing features to enable customers to quickly create advanced continuous integration and deployment pipelines. I was also tasked with creating APIs to allow for enabling dynamic monitoring for our services using technologies like Nagios Core.

Competencies

Github	https://github.com/adedomin https://github.com/GeneralUnRest
Languages	Java, Scala, Clojure (Build tools, IDEs and various frameworks) JavaScript (Node.js, web development, tools, etc) Perl 6, Python, Shell scripting, other scripting languages Ansible, Puppet
Concepts	Continuous integration and continuous deployment Distributed Computing (microservice oriented web applications) Object oriented and functional design Advanced text processing Leveraging various databases for object and persistent app storage
